2013 ACR-EULAR classification criteria can support early diagnosis. *The treatment target is clinical remission according to ACR-EULAR definition or, if remission is unlikely to be achievable, at least low disease activity. **The treatment target is clinical remission according to ACR-EULAR definition or, if remission is unlikely to be achievable, at least low disease activity. The target should be reached after 6 months, but therapy should be adopted or changed, if no improvement is seen after 3 months. †The most frequently used combination comprises methotrexate, sulfasalazine and hydroxychloroquine. ‡Combinations of sulfasalazine or leflunomide (except with methotrexate) have not been well studied, but may include combining these two and also with antimalarials; these circumstances are detailed in the text. §Abatacept, certolizumab, etanercept, golimumab, infliximab or respective well studied and FDA/EMA approved biosimilars, where licensed. ¶Kinase inhibitor + conventional DMARD.
